The Amazing Animal Sanctuary

Read the passage and answer the following questions:

In the heart of Greenwood Forest lies the Amazing Animal Sanctuary, a place where animals big and small can find refuge and safety. The sanctuary was established ten years ago by Dr. Emily Parker, a dedicated wildlife biologist. Dr. Parker's love for animals and her passion for conservation led her to create this haven for creatures in need.

The sanctuary spans over 50 acres and is home to a wide variety of animals. From majestic deer that roam the meadows to tiny squirrels that chatter in the trees, the sanctuary is a bustling community of wildlife. There's even a small pond where ducks and turtles have made their homes.

One of the most fascinating parts of the sanctuary is the rehabilitation center. Injured animals are brought here to receive medical attention and care. Once they're healthy again, they are released back into the wild. The sanctuary also educates visitors about the importance of protecting and preserving the natural habitats of these animals.

1 Who established the Amazing Animal Sanctuary?

2 What is the purpose of the rehabilitation center at the sanctuary?

3 Describe two types of animals that can be found in the sanctuary.

4 What is the significance of releasing rehabilitated animals back into the wild?

5 What do visitors learn at the Amazing Animal Sanctuary?

Difficult Words in the Passage with their meanings

- 1.Sanctuary:A place of safety or refuge, often used to protect and provide care for animals.
- 2.Majestic:Having grandeur, beauty, or dignity; impressive and awe-inspiring.
- 3.Refuge: A safe place or shelter where someone or something can find protection.
4. Biologist: A scientist who studies living organisms, their interactions, and their environments.
- 5.Conservation:The careful preservation and protection of natural resources and environments.
- 6.Haven:A safe and peaceful place, usually used in the context of a sanctuary or refuge.
- 7.Community:A group of living organisms living in the same area and interacting with one another.
- 8.Rehabilitation: The process of restoring health and normal functioning, often used in the context of recovering from injury or illness.
- 9.Ecosystem: A community of living organisms (plants, animals, and microorganisms) interacting with their non-living environment.
- 10.Preserving: Protecting and maintaining something in its original state or preventing its deterioration.
