Duolingo Fill in the Blanks, Practice Exercises with Answers

Answers

Exercise 1

Children or adults can suffer deteriorating vision at any stage of life. The visual impairment or **blindness** bars their ability to see the surroundings. The students with such impairment have problems **reading** and writing or getting visual **instructions** from the teacher. For example, a student having **vision** problems will not be able to **read** the instructions on the **whiteboard** like other students. He will not be able to follow the **teacher** like his other classmates because he cannot see things. Blurred vision, **headaches**, redness or sties, squinting or misaligned eyes can be identifiers of vision issues. The impairment can be severe, mild or moderate.

Exercise 2

The view from the top was magnificent. There was a large panorama of green hills, winding roads and wooden houses. I could see that night was **falling** and it was not wise to **explore** the woods at this time. So we decided to sleep. We **got** up early next day. The morning was pretty quiet on the **hilly** area. Only the tourists like us were **getting** ready for their **hiking** trip. We also finished our **breakfast**, took our **backpack**, and set out to explore the hills.

Exercise 3

Sugar is one of the purest ingredients and a natural carbohydrate, found in fruits, vegetables and nuts. Sugar is made by green **plants**

through photosynthesis, a natural **process** that turns sunlight **into** energy. Sugar is **harvested** from sugar beets, root vegetables that grow in cooler climates, and sugar **cane** plants, **tropical** grasses that grow up to 20 feet tall. Sugar beet and sugar cane go-to sources for sugar **because** they have the highest percentage of sucrose of all plants. For both, the refining process removes all **impurities** and the surrounding plant matter, leaving only pure sucrose.(sugar.org)

Exercise 4

Very few companies around the world produce airplanes on a large scale. But aircraft construction is a **process** that usually involves **numerous** other companies and plants in addition to the **many** manufacturing company. The other companies often times **produces** the components that go into the plane. Or just produce the parts that go into making the major **components**. A company for instance can be responsible for producing airplane windows. And as this process is not **limited** to companies in the same city as the manufacturing plant or **even** the same country, sometimes airplane parts can come from all over the world.(oxfordsaudia.com)

Exercise 5

It's so hot deep in the earth that some rocks slowly melt and turn into a thick, flowing substance called magma. Because it is **lighter** than the solid rock around it, magma rises and **collects** in magma chambers. After some time, some of the magma pushes holes and **cracks** in the earth's surface. Magma that erupts is called lava. Some **volcanic** eruptions are explosive and **some** are not. The kind of eruption **depends** on the composition of the magma. When magma is **thin** and flowing, gases can easily **escape** from it. When this type of magma erupts, it flows **out** of the volcano. Lava flows does not always kill people because they move slowly enough not to harm people.
